

Our fully warrantied, in-house workshop can repair pumps, mixers, blowers and valves. All repairs are carried out with OEM approved spare parts.

Our fully equipped repair centres in Glasgow, Edinburgh and Aberdeen enable us to carry out repairs to pumps, mixers and blowers over and above 100KW. Pumps are cleaned, stripped and inspected and diagnosed for any faults or wear. The pumps are then repaired, tested and re-painted.

Why choose Ferrier Pumps?

Established in 1981, Ferrier Pumps are water, wastewater treatment and pumping specialists and have been serving Scotland for over 40 years. We have developed and nurtured long-standing relationships with many globally recognised brands to ensure that we can offer our clients the best available technologies to meet their specific needs.

The Benefits

Experienced Team

Collection & Returns

Genuine Spare Parts

Large Spares Stock

Fast Turnaround Times

FLOW FURTHER.

Key Features

- **On Site Repairs**

Our workshop team are happy to work on process critical assets in situ.
- **Site Removal and Collection**

We offer a removal or collection service to all our customers to avoid having to arrange third party carriage. We're also happy for our customers to deliver equipment directly to our workshop, if necessary.
- **Detailed Inspection and Testing Reports**

All equipment on arrival to the workshop is inspected by a qualified and capable team of electrical and mechanical engineers. All reports and photographs are available on request for every stage of the inspection process.
- **Repairs Using Major Manufacturer's OEM Parts**

We only use top quality products matching or exceeding the quality of the part removed from the machine. Shaft repairs, coating and machining can also be offered to reduce downtime and cost on certain components.
- **Pressure Testing and Post Repair Reports**

All units leaving our workshop are pressure tested and reports can be submitted as required.
- **Pump Performance Testing via parent company**

We have access to a pump test facility with the capability of testing equipment, both dry and submersible, installed up to 150kW. This can be offered when the repairs are critical to the process to give additional quality assurance.
